

Do you Have an Indoor Air Problem?

If your answer is yes to any of the following questions or statements, you may have an "Indoor Air Pollution Problem".

You can't remember the last time you had your air system cleaned.

Do building occupants suffer from allergies, or other upper respiratory problems which seem to get better when not at work?

Do you have "dust trails" or discoloring coming out of your air duct registers?

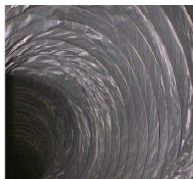

Do building occupants complain of frequent headaches, nausea, burning sensations in the nose, throat, or eyes when inside the building?

Dirt, dust, mold, pollen, and other airborne pollutants are recirculated through our air ducts with every cycle.

Combine this with moisture and you have the ideal breeding ground for fungi, germs, and mold. Studies have confirmed that some diseases, including salmonella, strep, and legionnaires disease are spread by contaminated air ducts.

Before

After

"Providing today's solutions to restore indoor environmental balance and maintain optimum indoor air quality."

- 24 hour response to flooding, water damage, and sewage backups
- Drying for structure and contents
- Mold Remediation
- Duct Cleaning
- Inspections and testing moisture and mold

Improve the Quality Of Your Indoor Air

With Air Duct Cleaning

*Healthy Indoor Air
Is our Specialty!*

The Process;

Our company uses the most advanced H.E.P.A (High Efficiency Particulate Air) Filtered Air Duct Cleaning System available. It is designed and manufactured by Nikro Industries, one of the leading manufacturers of H.E.P.A. filtered vacuum equipment in the United States. All of our equipment is manufactured to meet or exceed OSHA, EPA and NADCA Standards.

Our powerful H.E.P.A. Filtered Vacuum System will first be connected to your air duct near the supply unit. Specialized tools will then be used to dislodge the contaminants and debris in your air ducts. The powerful vacuum will then pull the contaminants out of the ducts and through the filtration system; returning clean air back into your building. Once the system is cleaned, all access holes are resealed returning your duct system to original clean condition.

But, we don't stop there.....

We clean the ENTIRE system;

Cleaning your air ducts is a great first step towards cleaning up your indoor air. It is also important to have the system, which conditions your air, cleaned as well. Our ENTIRE process includes not only the duct system but the mechanical unit itself, including coils and blowers.

The equipment;

Our powerful vacuum incorporates two backward incline motor and blower assemblies which create a powerful combination of vacuum and air flow, making it ideal for commercial air duct cleaning.

Each system has an exclusive 3-stage filtration system, which includes final stage H. E. P. A. filter rated at 99.97% @ 0.3 micron particles and larger, DOP tested. This actually meets or exceeds OSHA, EPA and NADCA standards for cleaning the air of toxic and nuisance dust.

The people;

Our technicians are experienced, trained, IICRC certified and OSHA compliant. The care and complete satisfaction of our customers is our utmost concern.

"I thought you would be proud to know that, whatever training your staff has received, has paid off. Each person my staff and I dealt with, explained things to us in expert terms and in a way that confirmed they understood the task at hand." Bonnie C. Mizenko, Director, Adult Learning Center.

A Healthy Building Improvement ;

We live in a world where healthy living has become a way of life. We diet and exercise to make ourselves feel better. We have also taken on environmental issues to make our world a cleaner and safer place to live. Yet the most overlooked issue is the air that we breathe.

The Environmental Protection Agency claims that indoor air has been found to be up to 70 times more polluted than outdoor air. Now consider that most people spend between 60% to 90% of their time indoors....
